

# Screen Master™

Triple Screen Protection  
By DAB

Available for all Sectional Door Models

## Dual Door System

with Triple Screen Protection that Provides Security, Ventilation, Visibility, and Lighting

EXTERIOR  
Hurricane  
Resistant Door

**FOOD DEFENSE PLAN and  
HOMELAND SECURITY COMPLIANT**

INTERIOR  
Screen Master TSP  
Triple Screen Protection

## APPLICATION

- Food Processing Facilities
- Slaughter and Processing Houses
- Food Distribution Centers
- Loading Docks
- Laboratories
- Water and Ice Security

## SECURITY

- Meets food defense guidelines
- Effectively protects the food supply
- Prevents entry by small insects
- Doors can close together for added security
- Very difficult to cut with most tools
- TSP prevents broken or torn screens

## VENTILATION

- Green source of air flow
- Airflow helps to cool down large areas
- Reduce energy cost
- Prevent heat and vapor build-up
- Decrease potentially harmful fumes
- Minimize unpleasant odors

## VISIBILITY

- Green source of natural lighting
- See-through to the outside environment
- Higher margin of privacy protection
- Noticeable reduction of solar heating

Available for all Sectional Door Models

**The First Line of Defense in Food Protection**

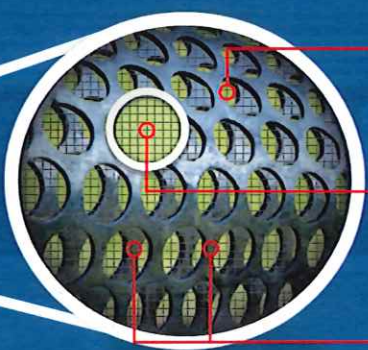

20-Gauge Galvanized Steel Meeting Rail

18-Gauge Galvanized Steel End Stiles

## TSP - Triple Screen Protection

The Screen Master TSP is constructed from two galvanized 20-gauge perforated steel screens sandwiching a 30-mesh screen that prevents insects or comparable airborne debris from entering a facility. The two perforated screens use a staggered 1/4" round hole pattern on 5/16" centers that act as a protective barrier that shields the 30-mesh screen from breaking or tearing.

Green Source of Light and Air Flow

30-Mesh Screen  
Keeps out insects or comparable airborne debris

Sandwiching a 30-Mesh Screen

20-Gauge Galvanized Steel Center Stiles

## FOOD DEFENSE PLAN and HOMELAND SECURITY COMPLIANT

## Screen Master TSP - Triple Screen Protection

The Screen Master TSP brings the strength of triple screens to guard and protect our nation's food industry. Using a 30-mesh screen sandwiched between two galvanized 20-gauge perforated steel screens, the Screen Master TSP provides the ultimate security, ventilation, and sanitation from a screen door. The TSP's unique construction is designed to keep insects or comparable airborne debris out from food processing plants, labs, and other similar facilities while adding a significant level of security and ventilation. Functioning as an independent sectional door structure, the Screen Master TSP operates in its own track system behind the existing overhead door. The dual door system provides additional security when both the TSP screen and the overhead door are in the closed position at the same time. Security, ventilation, and sanitation; it's all here with the Screen Master TSP. Visit our website or contact one of our experienced representatives to discuss how the Screen Master TSP can meet your specific needs.
